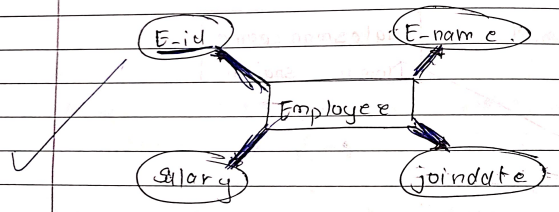
Practical - 5

Q] Create table employee having schema (E-id, E-name, Salary, Joindate) Insert 5 records and execute the following queries
1. Write an sql statement to update the salary to 70,000, where employee name is damodar.
2. Delete From the employee data who have joined on 09-05-2022
3. Add the employee detail having join date = "15/03/2005".
4. Execute all date Functions - Date_format(), Date_Add(), datediff(), curdate(), now()



* Create database

mysql> CREATE DATABASE Employees DB3;
mysql> Use Employee DB3;

* Create table employee

mysql> Create table employee (
E-id INT Primary key,
E-name Varchar (50),
salary INT,
Joindate DATE,
);

* Insert values

mysql> Insert into employee values
(1, "Momin", 5000, "2020-01-15"),
(2, "Rohit", 6000, "2020-01-16"),
(3, "coco", 7000, "2020-01-17"),
(4, "poco", 8000, "2020-01-18"),
(5, "zoco", 9000, "2020-01-19");

* Verifying table

mysql> SELECT * FROM employee;

E-id	E-name	salary	Join date
1	Momin	5000	2020-01-15
2	Rohit	6000	2020-01-16
3	coco	7000	2020-01-17
4	poco	8000	2020-01-18
5	zoco	9000	2020-01-19

+ 1. Update employee.

```
mysql> UPDATE employee
       SET salary = 70000
       where E-name = "Momin";
```

+ 2. Delete From employee.

```
mysql> DELETE FROM employee
       where joindate = "2020-01-06"
```

+ 3. Add employee details.

```
mysql> INSERT INTO employee values (6,
       "NewUser", 90000, "2025-05-01");
```

+ Verifying table

E_id	E-name	Salary	Joindate
1	Momin	70000	2020-01-15
3	coco	7000	2020-01-17
4	poco	8000	2020-01-18
5	zoco	9000	2020-01-19
6	NewUser	90000	2005-05-10

+ Execute all function cmd.

```
mysql> SELECT CURDATE();
```

CURDATE()
2026-02-09

```
mysql> SELECT NOW();
```

NOW()
2026-02-09 14:29:02

```
mysql> SELECT DATE_FORMAT("2026-02-05", "%d
       - %m - %Y") AS formatteddate;
```

formatteddate
05-02-2026

```
mysql> SELECT DATE_ADD("2026-02-01", INTERV
       10 DAY) AS newdate;
```

newdate
2026-02-11

```
mysql> SELECT DATEDIFF("2026-01-26", "2026-01-05
       AS daysdifference;
```

daysdifference
11
